

One Strange Animal!

The chameleon is one of the strangest of all animals. It can even change its color! It hides so well that its enemy can't see it. It hides by changing color. If it is on the branch of a tree, it can turn brown. If it is on green leaves, it turns green. The chameleon is strange for other reasons too. It has a very long tongue. Its tongue is all curled up in its mouth. The tongue is as long as its body! The chameleon also has weird eyes. They can move around in different directions at the same time; one eye can look up while the other looks down.

Main Idea:

Chameleon is a strange animal.

Supporting Detail:

Can change its color - it hides by changing color.

Supporting Detail:

It has a very long tongue

Supporting Detail:

It has weird eyes.

one can look up while the other looks down.
